Person 1:	Using the app was not completely natural as I am used to iOS devices. After using the app for a while and getting used to Android controls, it seemed relatively straight forward. I was confused that Wikipedia's menu was accessible with the same icon as the tab drawer, which led to several attempts of opening the drawer leading into Wikipedia's options.						
Person 2:	The main screen is clearly laid out and navigable, though it took me seconds to realize I was in fact using the app for Wikipedia; guess some sign would help user know clearly what he is doing.						
Person 3:	I really liked the app overall. Since I am new to android, it took me sometime to figure out how to use the app and some specific features but otherwise I thought it was really nice.						
Person 4:	I think the app was pretty straight forward except for some features. The app is really cool and should be easy to use even for the people who haven't used android before.						
Person 5:	The app was really simple to use. I really liked the ease of switching the languages especially. The app was straight forward.						
Person 6:	The app is simple to use. Just the button to add a new tab is not intuitive.
