

Defect No.	Defect	Severity (S1, S2 or S3)
1	Email addresses with same username but different domain fail to register (i.e. if I register helloteam7@gmail.com first, then register helloteam7@outlook.com, it will fail)	S2
2	When attempting to register, if only entering partial information in the "Detail Information" section (for example, only entering a hobby) the application will have an unrecoverable crash.	S1
3	When attempting to register, the "Detail Information" section is improperly titled the "Detail Inforamtion" section.	S3
4	When trying to "retrieve lost password", incorrect username is passed to the server. (should be email address without "@domain.com")	S1
5	When starting to create a account it does not ask to accept term and agreements as specified on product backlog	S2
6	When creating a new user, there is no "next button" as it says on product backlog	S3
7	When retrieving user's profile from server, no login credential is verified by the server (sniffed using Wireshark)	S1 (Security issue)
8	When uploading a big picture, the app crashes	S1
9	Range field on matchings does not restrict search results (same results for 1m as 200m when standing significantly more than 1m away)	S2
10	Matchings shows more than the maximum number of users allowed (should be 3 according to backlog; receive entire list of users)	S2
11	If click "Register Account" button multiple times, the app will show "registration failed" and crash later on, but the account is actually successfully regsitered	S2
12	Clicking the avatar of users returned by matchings does nothing, preventing viewing profiles or testing chat functionality.	S1
13	Underscores are not allowed in the domain name of email addresses (hello@gm_ail.com)	S2
14	While creating a new account, it allows passwords with withespace	S2
15	User hobbies are always "cs"	S2
16	The server allows user to login in different devices with same account	S3
17	The system does not send a random password to user's email address when resetting password before logged in, instead it prompts user to enter a new password	S3 (doesn't match with product backlog)
18	Size restriction on end of email domain is not upheld (.commm)	S2
19	when trying to put a password with 32 character, it was not possible	S2
20	Alpha channel of uploaded image is discarded - transparent part of the image is replaced by black	S3
21	If the user did not set security question, when resetting password before loggingin, the app just says "Security question retireve failed", instead of generating a new one and sending it to user's email address according to the backlog	S3
22	When changing passwork, it is possible to put whitespace characters	S2
23	Incorrect profile information is returned by server (new birthday field - not prompted for user to enter when registering, hobby field - seems like always being set to "cs" no matter what user enter, phone field - seems to be empty, not prompted for user to enter when registering)	S2

24	When Trying to create a new account with an e-mail already used to create an account, the app say it was not possible but after some seconds the app crashes	S1
25	If the user did not answer security question, when resetting password before logging in an empty answer is not accepted.	S2
26	When logged in, resetting the password to something greater than 32 characters is accepted; furthermore, since the password is now longer than the maximum, it is then impossible to log back into the app	S1 (due to blocked login)
27	Failed to update profile because the server always complaining "birthday format is not valid", and birthday is not even mentioned in the product backlog	S1
28	User nickname is not a given field in registration or in editing profile	S2
29	Although the UI for updating profile allows user to update security question and its answer, however, this information does not seem to be the query that is sent to the server	S2
30	It is possible to create a account with age bigger than 100	S2
31	Trying to edit the profile without internet, the app crashes	S1
32	When inserting a letter on the field for matching range field the app crashes	S2
33	Attempting to get matchings seems to randomly cause unrecoverable crashes	S1
34	There is no button to manual update the user location	S3
35	The app doesn't seem to update user's location automatically (or we haven't waited long enough)	S2
36	It is not possible to submitt profile changes two times without closing the profile change screen and open it again	S2
37	Login screen image is misplaced in phone with Android 4.0	S3
38	App runs on Android 4.0 (backlog says android 4.0.3 or newer)	S3
39	Matching only work once (goes to matching, then switch to profile, and again switch to matching, it fails to function)	S2
40	When logged in, rotating the phone between portrait and landscape modes will reset the app to the Home logged in screen	S2
